

The below scenarios are for explaining certain real world scenarios across emergency and IPD departments that would define the roles of cashier and receptionist and their user access and restrictions:

A patient visits Emergency Ward:

Scenario 1: Minor Injuries/illness

- Step 1: Doctor sees the patient and writes physical prescription
- Step 2 (parallel to step 1): Nurse records vitals and all other consumables and procedures and other details on a paper
- Step 3: Nurse/Staff along with the patient goes to the receptionist with the prescription and nurse notes (both of which are physical)
- Step 4: Receptionist Clicks on generate bill -> selects "Emergency" Bill type -> upon clicking emergency bill type, **New addition** the billing page should have a "upload prescription" button for the receptionist to upload scanned copy of the physical prescription -> the receptionist fills all the other consumables and other items from the nurse's notes in the bill items and completes all the other things that's there -> the receptionist should not have "Collect payment" option for Emergency & IPD bill type -> after filling in all the details, the receptionist clicks on Generate bill -> confirmation pops up -> receptionist confirms -> prints the bill and hands over to patient
- Step 5: patient takes the bill to cashier (the bill should have patient ID and all other necessary data at the top) -> Cashier can see the bill in the billing page under "emergency" and "all" filter -> clicks on collect payment and collects the payment and generates an invoice which can either be printed or sent to whatsapp

Scenario 2: Admission recommended

- The above steps till step 3 is same

Scenario 2.1 – the patient decides not to get admitted

- Step 4: Receptionist Clicks on generate bill -> selects "Emergency" Bill type -> upon clicking emergency bill type, **New addition** the billing page should have a "upload prescription" button for the receptionist to upload scanned copy of the physical prescription -> this time the receptionist also checks the "Admission Recommended" option, ""New Addition"", upon checking the admission recommended option, there should be another field which says "Admission Initiate – Yes/No" -> receptionist checks "No" option -> the receptionist fills all

the other consumables and other items from the nurse's notes in the bill items and completes all the other things that's there -> the receptionist should not have "Collect payment" option for Emergency & IPD bill type -> after filling in all the details, the receptionist clicks on Generate bill -> confirmation pops up -> receptionist confirms -> prints the bill and hands over to patient

- Step 5 is same

Scenario 2.2 – the patient decides to get admitted

- Step 4: Receptionist Clicks on generate bill -> selects "Emergency" Bill type -> upon clicking emergency bill type, **New addition** the billing page should have a "upload prescription" button for the receptionist to upload scanned copy of the physical prescription -> this time the receptionist also checks the "Admission Recommended" option, ""New Addition"", upon checking the admission recommended option, there should be another field which says "Admission Initiate – Yes/No" -> receptionist checks "Yes" option -> Upon checking the yes option, the billing page to have details of IPD Admission (All the details that is there in IPD admission should be shown in the billing page) – which the receptionist will fill, like assign beds etc. etc -> the receptionist fills all the other consumables and other items from the nurse's notes in the bill items and completes all the other things that's there -> the receptionist should not have "Collect payment" option for Emergency & IPD bill type -> after filling in all the details, the receptionist clicks on "Generate bill & Initiate admission" (please note – as the receptionist selected "Yes" for admission initiation – the generate bill button now shows "Generate Bill and Initiate admission" -> Upon clicking the button, a new IPD admission gets created and an ongoing IPD bill gets generated for that admission.
- Please note – the receptionist will no further be able to add/modify this particular IPD bill – only the nurse and cashier can do that.
