

1. In the “Add Charge” page of – when user selects “Consultation” type – it Should show the “Admitting Doctor” option as well

The screenshot displays the 'Add Charge' modal in a medical billing application. The 'TYPE' dropdown is set to 'CONSULTATION'. The 'DOCTOR' dropdown menu is open, showing a list of options: '— Select doctor —', 'IPD1', 'IPD2', and 'Special Doctor (visiting/external)'. A red rectangular box highlights the dropdown menu. In the background, a 'Medical' bill is visible with the following details: 'Admitting Doctor: OPD Doc1', 'Attending Doctor: IPD2', 'Reason: Accident', and 'Bill: MBS-BILL-2026-00012'. A fee of ₹1200.00 is shown as 'Paid'.

2. The Fees set for IPD doctor from Doctor's Page – is showing as OPD consultation in the admin settings page. This consultation fee should be linked with the doctor type – OPD/IPD/Emergency. For IPD doctor – there should only be IPD fees, similarly for a doctor who attends both OPD and Emergency – the respective consultation fee for OPD and emergency should be tagged correctly and it should reflect in billing as well. For example if a receptionist has selected “Emergency Type” from the Generate Bill page and selects a doctor who has both OPD and Emergency – only the Emergency consultation fee should get auto-populated
3. Similarly for “Add Charge” page for nurses – If a nurse selects an IPD doctor in the “Add Charge” page – the doctor's fees should auto-populate. Please note as per point 1 – a nurse can also add charges for OPD/Emergency/Admitting doctor for an ongoing IPD bill – the selected doctor's respective consultation fee should be added.
